CaseSync: Institution-Centric Case Coordination

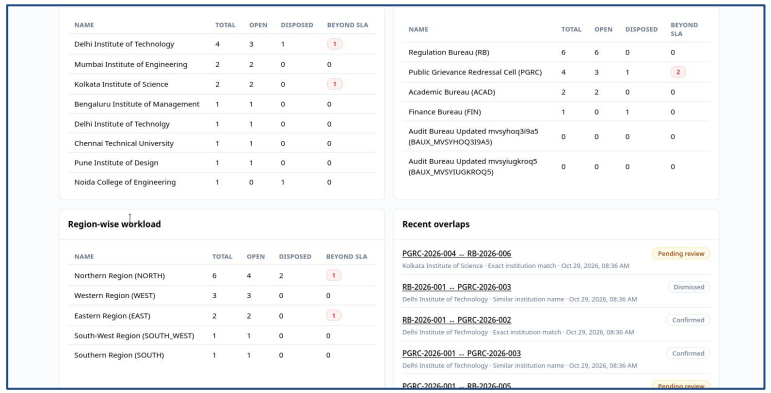

SMART INDIA HACKATHON 2026

Institution-related ***complaints*** can ***enter different Bureaus or Cells***.

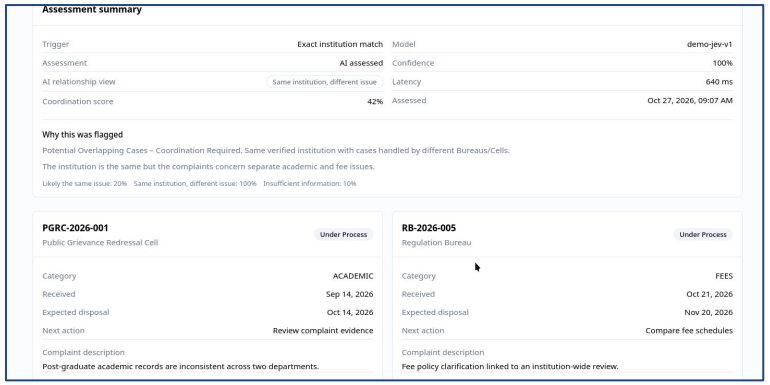

Independent case handling can ***hide concurrent*** action on the ***same institution***.

A case status ***alone*** does not show its ***related cases or assigned teams***.

Officials need ***traceable coordination*** without merging ***distinct*** complaints.

"a ***monitoring layer*** for institutional profiles, *related cases, responsible Bureaus/Cells* and ***action history***"

Ref	What Already Exists	Why it Matters	CaseSync Difference
CPGRAMS	Centralized registration, routing, tracking and role-based access.	Government guidelines require unique IDs, status tracking and workflow routing.	Institution profile, case relationships and cross-Bureau overlap review are proposed as explicit AICTE functions.
UGC e-Samadhan	Sector-specific single-window grievance registration and monitoring.	The portal publishes 12,425 submitted and 3,865 closed cases when accessed in Oct 2026.	AICTE needs a dashboard for institution-related cases across its own Bureaus/Cells.
AICTE Framework	Institution-level online grievance mechanisms, SGRC and Ombudsperson process.	AICTE's Approval Process Handbook sets governance expectations, including a 15-day referral step.	Explicit cross-bureau overlap review for AICTE

Technical Approach

SMART INDIA HACKATHON 2026

User Flow

Authorized AICTE Official — AICTE

↓

Sign In — Better Auth — All Roles

↓

Dashboard & KPIs — Overview · Key Metrics · Recent Activity — All Roles

↓

Case Registry & Workspace — Register · Track · Assign · Escalate — All Roles

↓

Institution Profiles — View · Manage · Update — All Roles

↓

Overlap Review Queue — Authorized

- Rules-based Candidate Detection
- → Jev AI (Optional)
- → Human Review: Confirm / Dismiss / Link / Unlink

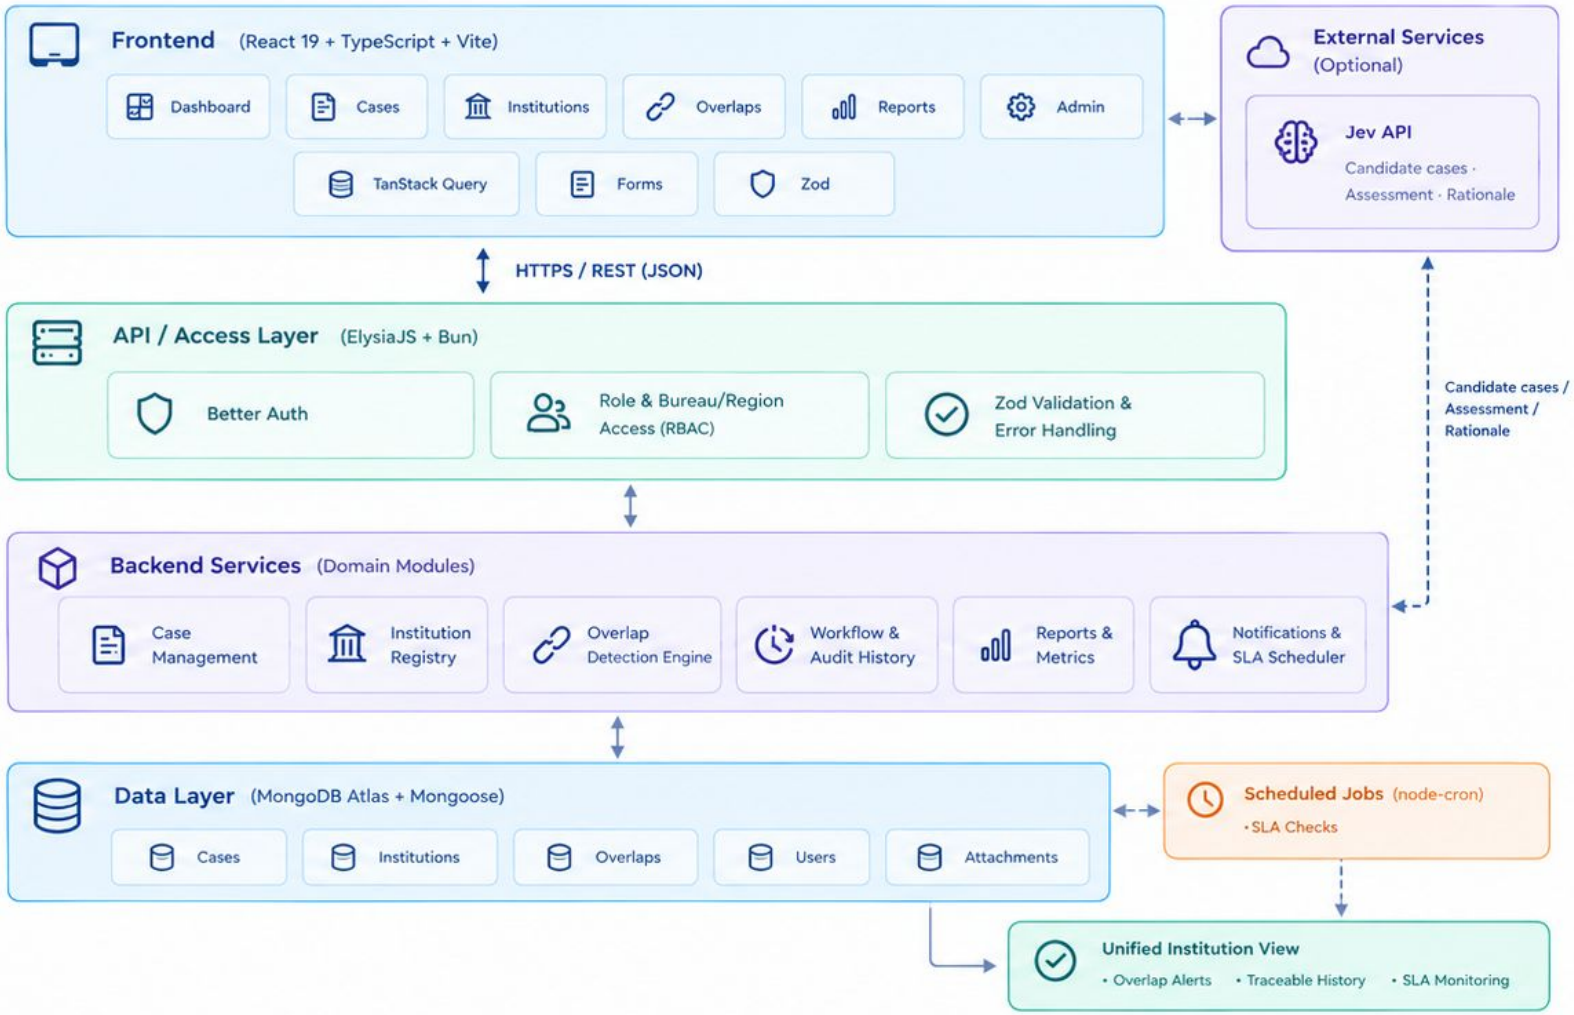

↓

Reports & Analytics / Administration — Trends · Insights · System Settings — All Roles

↓

Notifications & SLA alerts — Reminders · Overdue cases · System updates — All Roles

Technical Architecture

Feasibility and Viability

SMART INDIA HACKATHON 2026

Analysis of Feasibility:

Technical	High	Modular web app, MongoDB and rules-first matching support an achievable MVP
Data Integration	Moderate	Synthetic demo data first; CSV/API import as future scope; validate IDs and retain source references
Scalability	Moderate–High	Indexed collections, pagination and stateless API; Atlas can scale
Cost	Low–Moderate	Open-source stack, Atlas free tier and optional Jev (depends on the situation)
Implementation	Moderate	Profiles/auth → cases/actions → overlap/Jev → dashboard/reports → validation.Profiles/auth → cases/actions → overlap/Jev → dashboard/reports → validation
Operational	High	Role-based queues, audit trail and SLA reminders

Potential Challenges and Their Mitigation:

Challenges	Mitigation	Challenges	Mitigation
Ambiguous Institution Data	Verified ID first; fuzzy matches go to a human review queue	***False Related-case Alerts***	Show reasons and evidence; reviewer confirms or dismisses
Sensitive Case Records	Least-privilege RBAC, server-side authorization, protected documents, audit.	***Fragmented Workflows***	Assigned ownership, escalation reminders, complete timeline.

Impacts and Benefits

SMART INDIA HACKATHON 2026

Potential Impact on Target Audience:

A *shared institutional view* helps **officials see parallel cases, current ownership and the actions already taken** before they begin or escalate work.

Demo: *PGRC* registers a case for **Institution A** → *RB* registers a separate case for the **same** institution → CaseSync raises **"Potential Overlapping Cases – Coordination Required"** → Reviewer inspects evidence and confirms/dismisses → **both** cases **remain independent** on the institution profile → **dashboard and reports** reflect the **updated** status.

Benefits of the Solution:

For Officials	For Bureaus/Cells	For Governance
One institution profile with every linked case kept independent	A cross-Bureau view of active work and the assigned officer	A durable record of transfers, decisions and case actions
Clear reasons for each potential-overlap alert	Review workflow prevents silent duplicate effort while preserving case autonomy	Ageing, backlog and workload views support focused monitoring
Fewer manual searches across disconnected case lists	Escalation reminders support timely attention to pending cases	Role-based access exposes only the information each official needs
Case timeline gives context before a new action begins	Common data fields improve handoffs and reporting quality	Analytics can flag patterns for review without making automated determinations
